

INTERNET DATA SAFE THE DIGITAL ONLINE VAULT FOR YOUR CUSTOMERS

Valuables such as jewelry, important contracts and certificates are usually safely stored in a bank's secure safe deposit box. However, individuals now have an increasingly important number of valuable digital data. In addition to data with a financial value such as intellectual property, assets and business documents, there is the more emotive data such as photos that need to be stored for the future.

With the Internet data safe DSwiss AG enables banks to offer the continuation of the traditional safe deposit box service to meet the requirements of the digital age. The Internet data safe not only offers highly secure and confidential storage but also provides long-term preservation of important electronic data as well as a structured storage space that is always accessible.

Highly-secure online storage for your customers

The Internet data safe – the digital online vault – provides your clients with a secure and confidential storage and long-term repository for important digital data. Secure online storage is available to customers through any web browser from anywhere and at anytime. Consumers put a lot of trust into their bank in terms of looking after their valuables. Therefore, banks have a natural advantage over other providers and are well positioned to offer a digital online vault as the safe deposit box service for the digital age.

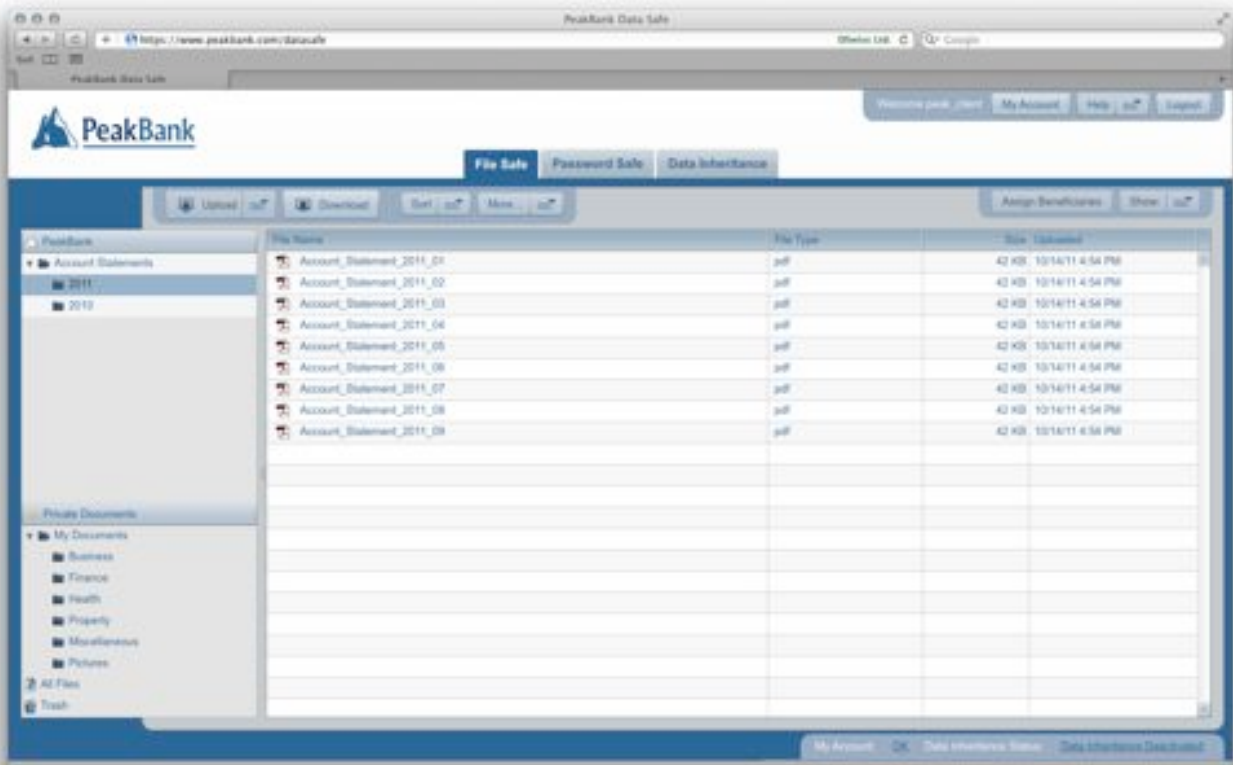

The client has anytime and anywhere secure access to the personal online vault via Internet.

Benefits for banks

- Attractive service and unique value proposition: The „safe deposit box“ for the digital age.
- Increased customer loyalty through long-term usage of a data safe service.
- When using the data safe for delivery and storage of financial statements: cost effectiveness by avoiding paper documents.
- Additional revenue opportunities by charging a service fee to retail clients.
- No investment costs, short time-to-market and full scalability thanks to SaaS (software-as-a-service).

Benefits for your clients

- Highly secure storage of documents and passwords in the personal online vault.
- Secure access anytime and anywhere via any Internet-enabled device.
- Complete confidentiality and privacy: Neither DSwiss or any third parties can access the data safe.
- Bank documents delivered directly into the data safe: clear, and structured long-term repository for financial documents.

The design of the Internet data safe can be adapted to your specific needs, e.g. in order to match the user interface of your existing e-banking solution.

Highest security and confidentiality

The DSwiss Internet data safes implement highest security standards at the level of modern e-banking solutions. This includes complete encryption, a 2-factor authentication option (mobileTAN, one-time-password delivered by text message) and confidential storage of data in banking compliant Swiss data centers. By technical design nobody other than the user can ever access customer data. The data safe offers a user-friendly interface that is intuitive and easy-to-use.

Offering

The data safes are operated by DSwiss and offered as an Internet service (SaaS) directly from our Swiss banking compliant data centers. Data safes can be deployed in neutral branding (DSwiss brand), co-branded or as a white-label service with your own corporate design (as shown above).

We will support you alongside our key partners to integrate the data safes into your IT infrastructure.

About DSwiss

DSwiss AG is an independent corporation with headquarters in Zurich. We offer companies a low-risk way to quickly and economically launch their own Internet data safe solution to clients. In addition, we provide highly secure Internet services and long-term protection of important digital data to customers worldwide through our business-to-consumer service SecureSafe; an Internet data safe solution with a unique built-in data inheritance mechanism. Our experienced team has years of expertise gained in the IT security sector.
