

INTERNET DATA SAFE

SECURE AND CONFIDENTIAL DELIVERY OF DIGITAL DOCUMENTS TO YOUR CLIENTS

A growing number of private banking clients and asset managers would like access to their asset information from anywhere and at anytime. Unfortunately, private and confidential documents are subject to serious threats on the Internet from cyber criminals and from simple user errors both of which can result in the disclosure of valuable information instantly.

DSwiss AG enables private banks and asset managers to securely and privately transmit confidential digital documents via an Internet data safe service (SaaS) to customers worldwide.

Digital communication channel to customers

The Internet data safe is a highly secure online storage service for the exchange of confidential digital documents. Electronic documents are provided by the asset manager over a secure connection directly into the data safe located in one of our banking compliant data centers in Switzerland. With access available via the Internet your clients can obtain their digital account statements, reports and an inventory of assets at anytime from their personal data safe. Additionally, your clients can use the data safe to store important personal documents and passwords. This digital vault also offers clients many additional benefits.

Highest security and confidentiality standards

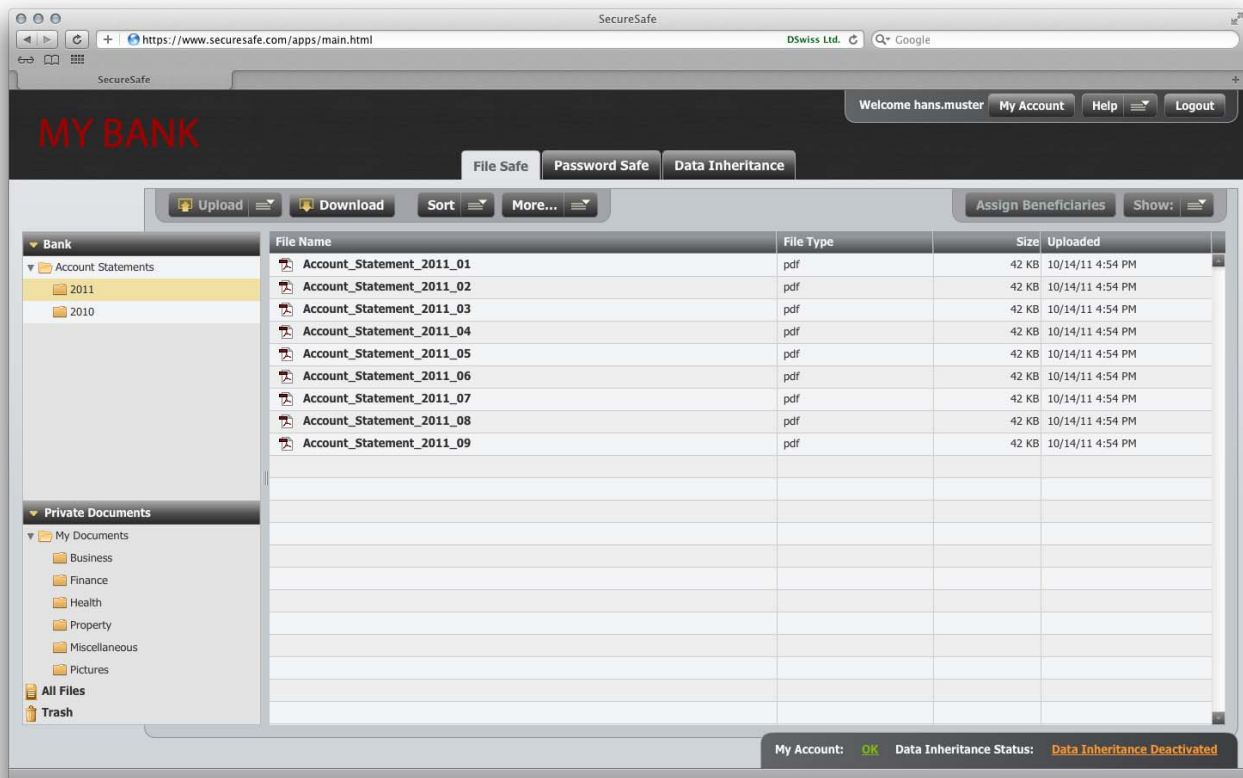

Our Internet data safes were developed, implemented and tested in collaboration with worldwide security experts. The highest security standards were chosen for both the development process as well as the software-as-a-service (SaaS) infrastructure. Our data safes also offer a 2-factor authentication option (text message/mTAN) that guarantees the strongest level of encryption. The technical features of our data safe SaaS-platform outperform established online-banking security measures. In addition, neither DSwiss nor any third parties can access the personal data safes.

Benefits for banks and asset managers

- Up-to-date delivery of financial documents in digital format.
- Complete confidentiality and protection of privacy.
- Cost effectiveness (by avoiding paper documents).
- Value-add for clients: personal digital online vault.
- No investment costs, short time-to-market and full scalability thanks to SaaS (software-as-a-service).
- Delegation of responsibility for the transfer and protection of important client documents to DSwiss AG.

Benefits for your clients

- Secure access anytime and anywhere to financial information and confidential data.
- Easy-to-use and structured repository for all financial documents.
- Complete confidentiality and privacy protection. Neither DSwiss nor any third parties can access the data safe.
- Personal use of a data safe for the protection and preservation of digital assets (documents and passwords).

Data safe as a structured repository for all your client's financial documents

Easy-to-use for your clients

The client accesses their personal data safe using a username, password and a one-time passcode delivered by text message as an optional 2-factor authentication; the same as modern e-banking solutions. The data safe offers a user-friendly interface that is intuitive and easy-to-use.

Offering

Our data safes and interfaces for the automated delivery of documents, security and account management functions are operated by DSwiss and offered as an Internet service (SaaS) directly from our Swiss banking compliant data centers. Data safes can be deployed in neutral branding (DSwiss brand), co-branded or as a white-label service with your own corporate design (as shown above).

We will support you alongside our key partners to integrate the data safes into your IT infrastructure.

About DSwiss

DSwiss AG is an independent corporation with headquarters in Zurich. We offer companies a low-risk way to quickly and economically launch their own Internet data safe solution to clients. In addition, we provide highly secure Internet services and long-term protection of important digital data to customers worldwide through our business-to-consumer service SecureSafe; an Internet data safe solution with a unique built-in data inheritance mechanism. Our experienced team has years of expertise gained in the IT security sector.
